Validation of Email id

Write up :

Step 1 : In a Email Class, create a String of Array named as EmaiId which contains mail id in it.

Step 2 : Create ArrayList named as MailList and pass array EmailID in it.

Step 3 : Create object for Scanner class for dynamic input from the user.

Step 4 : Then get input from the user.

Step 5 : In IF condition, inbuilt method "contains"is used to check whether the given email id is existing in the arraylist or not.If true it prints "email id is existed".

Step 6 : Else it prints "not presented in the list".
